Product Overview

Mini-Circuits' ZVE-143-S+ is a Class-A, two-stage, unconditionally stable amplifier providing flat gain over an extremely wide frequency range from 8 to 14 GHz. This model is capable of delivering up to 0.6W output power at P1dB with high output IP3 supporting a wide range of sensitive, high-dynamic range receiver applications and many systems where high performance over wideband is needed. It operates on a +12V supply and features built-in safety features including protection against reverse bias and immunity to accidental open or short loads for 2 minutes. The amplifier comes in a rugged, compact case (1.05 x 1.01 x 0.35") with SMA connectors and an optional heat sink for efficient cooling.

Key Features

| Feature | Advantages |
|--|--|
| Ultra-wideband, 8 to 14 GHz able to work from 5.0 to 14.5 GHz | Enables a single amplifier to be used in a wide range of applications. |
| Excellent gain flatness, ±0.8 dB typ. across full frequency range | Provides consistent performance across its operating frequency, minimizing the need for external equalizing networks in wideband applications. |
| High gain, 19 dB typ. | Reduces the number of gain stages, lowering component count and overall system cost. |
| Class A Amplifier | Provides good linearity with low signal distortion. |
| Low Noise and High IP3: • NF, 4.5 dB typ. • OIP3, +35 dBm typ. | The combination of low noise and high IP3 makes the ZVE-143-S+ ideal for use in low noise receiver front end (RFE) as it gives the user the advantages of sensitivity and two-tone IM performance at both ends of the dynamic range. |
| Rugged design | Built-in protection against reverse bias and accidental open and short loads provides added reliability for demanding operating conditions. |
