

### **TECHNICAL DATA SHEET**

## PE15B5006

The PE15B5006 is a Class AB high power Bi-Directional Amplifier that operates in C-Band from 5125 MHz to 5875 M Hz and features autosensing transmit/receive (T/R) control. This amplifier generates 10 Watts typical Psat RF output power to boost performance of datalinks and transmitters. The module utilizes the latest Gallium Nitride (GaN) semiconductor technology with 20% power efficiency. The package design features a small form factor that's ideal for size, weight, and power (SWaP) constrained applications used in broadband RF telemetry, tactical communication, electronic warfare, and unmanned aircraft and ground systems, as well as software defined radios. Impressive typical performance includes 10 dB of transmit gain, 10 dB of receive gain, 2 µsec switching speed, and low harmonic suppression of -20 dBc. Additionally, with a nominal +30 dBm (1 Watt) RF input power, the amplifier can provide 10 dB of gain from 5125 MHz to 5875 MHz for continuous wave (CW) and near-constant envelope waveforms. Operating voltage is +28 Vdc with 2.5A of DC current. Additional features include a single power supply and overvoltage protection. For TTL logic on/off autosensing control, +3.3V logic is used for monitoring Tx and Rx status, 0V for transmit mode and +3.3V for receive mode. The amplifier automatically switches between transmit and receive through RF detection at the XCVR (Transceiver) SMA port. The rugged Mil-Grade assembly supports female SMA RF input/output connectors and a micro-D 9 pin socket command control connector with an accessory cable assembly included. The operating baseplate temperature range is -40°C to +85°C and the unit is guaranteed to withstand up to 95% relative humidity, altitude levels up to 30,000 ft, and random vibration and shock profiles (see chart below). Pasternak also offers an accessory Harmonic filter option, model PEHFL0001 that can be used at the output of the PE15B5006 bidirectional power amplifier. This lowpass RF filter covers 2.5 to 6 GHz and has low insertion loss with power handling up to 50W and specifically designed to reduce harmonics at the output of transmitters operating at up through C-Band and offers rejection levels of greater than 20 dB from 8 GHz to 10 GHz. The filter is offered in a miniature SMA connectorized package.

50 Ohm Design

+3.3V TTL Logic Control

Female SMA RF Connectors

+28Vdc @ 2.5A DC Current

#### Features

- Bi-Directional GaN High Power Amplifier
- 10W Psat Output Power
- C Band Class AB Design
- Frequency Range: 5125 MHz to 5875 MHz
- Autosensing T/R Control
- 10 dB Transmit Gain
- 10 dB Receive Gain
- Switching Speed 2 usec

#### **Applications**

- Unmanned Aircraft (UAS) Group
  2 &3
- RF Telemetry
- RF Communications Systems
- Software Defined Radios
  - Data Linka
- Data Links

• Transmitters

-40°C to +85°C Operating Baseplate Temperature

Output Harmonic Filter Accessory Option

Small Form Factor Rugged Mil-Grade Package

- Test & Measurement
- Telecom Infrastructure

Unmanned Ground Vehicles
 (UGV)

Electrical Specifications (TA = +25°C, DC Voltage = 28Volts DC Current = 2.5A)

#### Transmit

Description	Minimum	Typical	Maximum	Units
Frequency Range	5.125		5.875	GHz
Psat Output Power		+40		dBm
RF Input Power		33		dBm
Gain		43		dB
2nd Harmonics			-20	dBc
