Transceiver Single Channel Module 17-21 & 27-31 GHz

Preliminary Datasheet

KKa-TR-SC-1929

Single channel satellite communications transceiver module for K/Ka-band.

Overview

The KKa-TR-SC-1929 transceiver module enables direct interface with a modem or Software Defined Radio (SDR) enabling full-function Kaband satellite systems.

The module is a complete RF satellite system that allows spacecraft designers a fast, reliable and cost effective means of implementing high data-rate Ka-band payloads. Additional channels can be added in both the transmit and receive paths to accommodate to specific customer requirements.

The RF outputs and inputs are standard waveguide flanges for high reliability and low loss antenna connections. In order to maximize data rates, the transmitter has an output monitoring function that enables precise amplitude stability when coupled with external pre-distortion or gain control systems.
